

ABSTRACT

The present invention provides an elastomeric film having anti-skid properties. The film comprises one or more layers, wherein at least one of the layers comprises from 0.1 to 10% (by weight) of an anti-skid additive, which does not melt, or has a melt temperature greater than 500 °F, and has a particle size between 50 and 500 microns. Suitable anti-skid additives may be sand, clay, silica, crosslinked polyethylenes, other polymers or ultra high molecular weight polyethylene (UHMWPE). Also provided is a resin composition and a method for manufacturing an elastomeric film having anti-skid properties.
